INFORMATION DISCLOSURE STATEMENT

Hon. Commissioner of Patents and Trademarks
United States Patent & Trademark Office
Washington, D.C. 20231

RECEIVED

MAR 19 2002

Dear Sir:

GROUP 3600

In accordance with the requirements of 37 C.F.R. 1.97 and 1.98, Applicant hereby submits the prior art documents listed hereinbelow, copies enclosed, which prior art was cited in the corresponding European Search Report dated January 25, 2002.

- (1) International Patent Application WO 00/35683, published June 22, 2000. This reference discloses an improved vehicle wheel construction with a peripheral rim, a central wheel hub and a plurality of spokes extending between the rim and hub, wherein the spokes have a first peripheral portion connected to the rim and a second central portion opposed to the first portion.

- (2) PATENT ABSTRACTS OF JAPAN, Vol. 007, No. 128 (M-220), June 3, 1983 & JP 58 047602 A (DAIDOU KOGYO KK), March 19, 1983. The purpose of this reference is to obviate the occurrence of wheel deflection, by boring through holes for coupling spokes extended in a tangential direction in each of projecting pieces which are formed around the periphery of a hub, while making tension stemming from each hub not to act as twisting moment.
- (3) U.S. Patent No. 1,464,566 for METAL WHEEL, By A.M. Ford, Patented August 14, 1923. This reference discloses a metal wheel, the combination of a hub comprising a tubular member having its ends swaged down to a smaller diameter than the center portion, complementary disks for clamping the spokes of the wheel, said disks being formed with annular flanges sleeve-fitted on the respective ends of said member, and interchangeable bushings fitted within said member and adapted to receive the spoke of said wheel.
- (4) European Patent Document 0 790 141, published August 20, 1997. Although this reference is in the French language, the drawings are believed to be clear.

(5) International Patent Application WO 93/09963, published May 27, 1993. This reference discloses a spoked wheel having a rim with a plurality of nipple holes engaged each by a nipple.

(6) French Patent Document 2 324 471, published April 15, 1977. Although this reference is in the French language, the drawing is believed to be clear.

The undersigned submits the above-identified references for independent consideration by the Examiner and does not make any admission that these references are or are not material to the present invention or that these references are or are not prior art with respect to the present invention.

If any charges are required in connection with this submission, it is requested that they be charged to Deposit Account No. 02-0184.

I hereby certify that the foregoing is a true and correct copy of the original as deposited with the United States Postal Service as first class mail in a letter addressed to the Commissioner of Patents and Trademarks, Washington, D.C. 20590
